

LW 57-4

Mounted-Clock type L57-4

Technical data

Digit dimensions:	57mm LED red
Display:	automatic brightness control
Dimensions:	Housing WxHxD 245x100x45mm
Frontpanel:	Satin stainless steel, 300x130x1,5mm

Product information "LW-57-4: Wireless AirTime LED-Wall clock "

LED-Clocks for inside areas available in digit dimensions 25 mm up to 180 mm for every application.

Wireless installation. Saves time, money and look much nicer.

The closed digits have an automatic brightness control with 32 steps.

The result is an excellent readability during all lightning conditions. It also saves energy and prolongs the half-life period of the digits to appr. 15 years.

- AirTime wireless, automatic summer / winter time changeover (in respective countries).
- No wire connection necessary in appr. 95% of all installations.
- Secondary clock entrance for 12 to 60 Volt polarity change, easy adjustment to an already existing slave clock complex.
- Installed batteries for immediate display after power failure, as well as preservation of time and date for appr. 10 years.
- Automatic brightness control, always the best contrast against the ambient light.
- Excellent display through cover all over segments.
- Best side viewing up to 160°

Many other options like TCP/IP, GPS-Antenna, temperature display, secondary clock entrance, 230 Volt AirTime, special finish possible (surcharge).
